SITA Flight Folder

Bolster your flights' efficiency and sustainability building on a multifaceted EFB app

SITA Flight Folder handles the heavy lifting of pre-flight preparation and post-flight reporting to relieve pilot workload. SITA's highly intuitive solution collates reams of documents and compares flight plans with pilot input to highlight potential issues immediately. So your people can focus on what matters most.

Reduce pilot briefing time by

50%

SITA

FOR AIRCRAFT

Easy and safe travel every step of the way.

Same flight plan Less time

SITA Flight Folder simplifies and digitizes pre-flight briefing packages for a smoother and speedier workflow. With manuals, charts, calculations, plans and more in an easy-access digital folder, pilots no longer need to process masses of data across digital and analogue applications under increasing time pressure.

SITA's pioneering 'manage by exception' approach highlights critical information early on in the briefing process. With color-coded indicators for METAR, TAF and NOTAMs, predicted RAIM outages and potential weather issues, pilots can make better plans in less time.

— Solution

One tool for transparent data, faster briefing, and simplified logging.
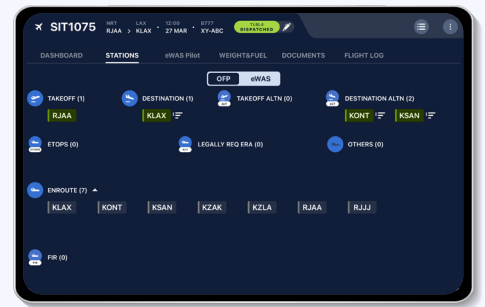

Reduce briefing and reporting times
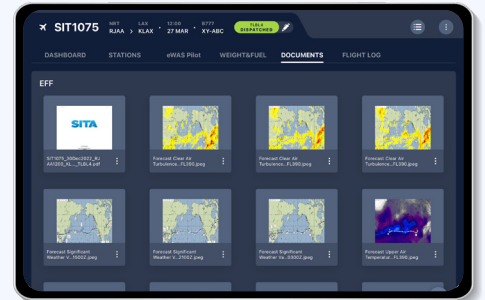

View critical information intuitively

Eliminate printed material on the flight deck

Streamline your process with minimal disruption

Implement SITA Flight Folder with minimal training and no impact on your existing systems in a matter of weeks

✓ Built to also work with ARINC 633-2 OFPs

▢ Available on iPads, Windows EFBs and web browsers

⇄ Integrates seamlessly into existing airline processes

▤ Compatible with most file types, .PDF, .txt, .PNG and more

Save time, reduce workload – in the cockpit and the operations control center

A single flight overview dashboard highlights critical information for pilots at a glance.

Streamlined flight logging with contextual dropdown and keyboard prompts makes logging a breeze.
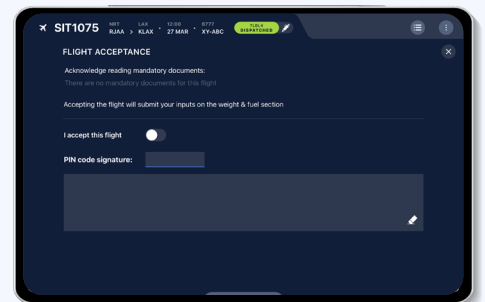

Stations tab shows proactive color warnings, focusing pilot attention on critical data to reduce information overload.

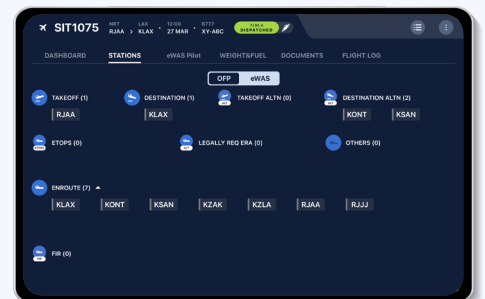

Update, send and receive digital OFPs in real-time for increased efficiency and reduced paperwork.

Flight plan sign-off is simple via signature or pilot code and automatically recorded for dispatchers.

View color-coded weather severity and proactive high-importance NOTAM warnings.

Designed for simple fuel calculation, refuelling requests, margin management and reporting.

Integrated with SITA eWAS weather app and SITA OptiClimb.

Strategic simplicity in every feature

SITA Flight Folder combines crucial flight data and documents in a single, live digital folder for effortless efficiency. Simple for pilots, simple for dispatchers.

Identify critical information early and promptly during the briefing process

Breeze through flight logging process by easily entering waypoint times and delay codes

Weight and Fuel module helps to quickly identify fuel needed

One simple tool for better planning and performance

— Solution

Efficient, effective, sustainable

Digital documents save time and limits paperwork, reducing your costs and your carbon footprint.

Designed for you, with you

SITA Flight Folder was co-developed with leading global airlines to reduce data overload, cut briefing and logging time, and improve situational awareness.

SITA's experts

are with you at every stage to ensure fast integration and a smooth learning curve.

Get set-up in weeks, not months
